KEY

♥+ Heart-stab. Professional rejections, failures, or lessons learned in my blockchain journey.

~> Squiggly arrow. What did I learn? How did it shape my expertise?

EDUCATION

♥+ **Master's at Stanford (2016):** Struggled with initial blockchain scalability research; my first Ethereum sharding prototype failed miserably.

~> Learned to pivot fast—shifted focus to Layer-2 solutions, which became the backbone of my thesis and later real-world projects.

♥+ **Bachelor's at UT Austin (2014):** Skipped advanced cryptography electives, thinking they were "too theoretical."

~> Regret hit hard when auditing smart contracts—self-taught cryptography later, now a core strength.

WORK EXPERIENCE

♥+ **ChainForge Labs (2021):** Early NFT marketplace deployment had a gas inefficiency bug—cost users 15

~> Mastered gas optimization in Solidity; reduced costs by 35

♥+ **Nexlify (2019):** Rejected from a top-tier blockchain role at ConsenSys due to lack of Hyperledger experience.

~> Built a Hyperledger supply chain solution at Nexlify instead—landed a better role later with that expertise.

♥+ **TechNova (2017):** First DeFi prototype crashed during testing; couldn't handle 10 concurrent users.

~> Learned scalability the hard way—now I stress-test every dApp for 100x expected load.

SKILLS

Solidity

Overconfident early on—wrote a vulnerable contract that could've been exploited.

Rust

Took too long to adopt for Solana; missed a hackathon deadline in 2020.

Auditing

Skipped formal verification once—client caught it, not me.

ACHIEVEMENTS AND INTERESTS

♥️✦ **ETHGlobal 2023:** Oversold my interoperability talk; demo crashed live.

🌊➡️ Perfected multi-chain testing post-failure—won Solana Hackathon next year.

♥️✦ **DeFi Yield Optimizer:** First version drained my test funds due to a reentrancy flaw.

🌊➡️ Became obsessive about security—open-sourced a bulletproof version later.

♥️✦ **NFT Rarity Engine:** Didn't apply for a grant; missed out on 10K *funding*. *Learned to seize opportunities* | *now I pitch every*
